DIGITAL LITERACY

-Project Report-

Name: Aanya Yadav
Registration Number: 25BAI10190
Branch & Year: B.Tech CSE – 1st Year
Course Code: CSE0001
Course Title: Digital Literacy
Institution: VIT Bhopal University

Date of Submission: 24.03.2026

Introduction

This project was undertaken as part of the Digital Literacy course, where I was supposed to assume the role of a Student Digital Ambassador. The aim of this project was to develop essential digital skills and create awareness among peers about the responsible and effective use of online platforms. This project focuses on multiple aspects of digital literacy, including online presence, communication, collaboration tools, and cybersecurity awareness. Through five structured tasks, I explored various digital tools and platforms that are commonly used in academic and professional environments. This portfolio not only demonstrates my practical learning but also reflects my understanding of safe internet practices and professional communication. Overall, this project helped me become more confident and responsible in navigating through the digital world.

Task 1 Write-up

For this task, I created a digital literacy awareness infographic using Prezi. The infographic highlighted key topics such as the definition of digital literacy, useful digital tools, safe internet practices, the importance of maintaining a professional online presence and email etiquette. I used Prezi's zooming interface to organize the content in a visually engaging way, allowing different sections to be explored smoothly.

Prezi offered a unique way of presenting the information compared to the traditional slide-based tools. However, I initially found it challenging to manage the zoom transitions and position elements properly without making the design confusing. It took some time to arrange the content in a clear and structured format.

This task helped me understand how visual storytelling can improve the way information is communicated. I also learned how to present important concepts in a concise and engaging manner. Overall, using Prezi improved my creativity and gave me experience with a different type of presentation tool that can be useful for future academic work.

Task 2 Write-up

In this task, I created my profiles on Kaggle, and ResearchGate and updated it on GitHub and LinkedIn to build a professional digital presence.

On GitHub, I developed a special REPOSITORY that includes my name, branch, and learning goals, which will help me showcase my projects and track my coding progress. On LinkedIn, I completed my Education section by adding my current degree, institution, and expected graduation year, making my profile suitable for professional visibility.

Kaggle introduced me to the field of data science by providing access to datasets, notebooks, and competitions, while ResearchGate allowed me to explore academic research and understand how knowledge is shared among scholars. Each platform serves a different purpose, ranging from coding and networking to research and data analysis.

Over the next four years, I plan to actively use GitHub to upload projects, Kaggle to strengthen my analytical skills, ResearchGate to explore research opportunities, and LinkedIn to build professional connections and explore internships. This task highlighted the importance of maintaining a well-rounded and professional online identity.

Task 3 Write-up

For this task, I explored HackerRank and Google Workspace tools. On HackerRank, I completed a beginner-level problem named “Solve Me First” which helped me understand basic coding logic and problem-solving techniques. It was a good introduction to coding practice platforms.

In addition, I created a Google Form titled “Digital Literacy Awareness Check” with five questions, including both multiple-choice and short-answer types. I also viewed responses using Google Sheets, which demonstrated how data can be collected and analysed efficiently.

These platforms are extremely useful for academic purposes. HackerRank helps in improving coding skills, while Google Forms and Sheets are valuable for conducting surveys, quizzes, and organizing information. This task enhanced my understanding of collaborative tools and their practical applications in education.

Task 4 Write-up

A common issue in digital communication is the misuse of email tone and structure. For example, a student sending an informal email to a professor without a subject line or proper

greeting can create confusion and appear unprofessional. This can lead to delayed responses or even being ignored.

In my task, I have included two emails which helped me learn the importance of writing clear subject lines, using respectful language, and structuring emails properly. A well-written email should include a greeting, a concise body, and a polite closing. Proper communication ensures clarity and builds a positive impression. This task also includes a “social media checklist” of do’s and don’ts

This task helped me understand how small mistakes in communication can lead to misunderstandings and how following basic etiquette can improve professional interactions.

Task 5 Write-up

While researching ransomware, I was surprised by how easily such attacks can occur through simple actions like opening an email attachment or clicking on an unknown link. I learned that attackers often disguise malicious files as legitimate documents, making them difficult to identify. This showed me that even basic mistakes can lead to serious consequences such as data loss and financial damage.

One important habit I will change is being more cautious while downloading files or clicking on links, especially from unknown or unverified sources. I will also ensure that I regularly back up my important data and keep my system updated with security patches.

This task increased my awareness of cyber threats and helped me understand the importance of preventive measures in maintaining digital safety.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in today’s world. Through various tasks, I learned how to create a professional online presence, use digital tools effectively, communicate properly, and stay safe online. Each activity contributed to both my technical and soft skills development. The experience has made me more confident in using digital platforms responsibly and efficiently. Overall, this project has been a valuable learning experience that will benefit me throughout my academic and professional journey.
